

# Deploy Containerized Apache Application on ECS Using ECR

By

Siddhi Vinayaka

# Deploying an Application on AWS ECS with ECR and Docker

## Step1: Create a Containerfile

### 1. Create Dockerfile (Containerfile):

- Create a Dockerfile with the following content.

```
FROM docker.io/ubuntu
RUN apt update -y
RUN apt install apache2 -y
RUN echo "<h1> Hello From Siddhi Vinayaka </h1>" > /var/www/html/index.html
CMD ["apachectl", "-D", "FOREGROUND"]
```

## Step 2: Configure AWS CLI

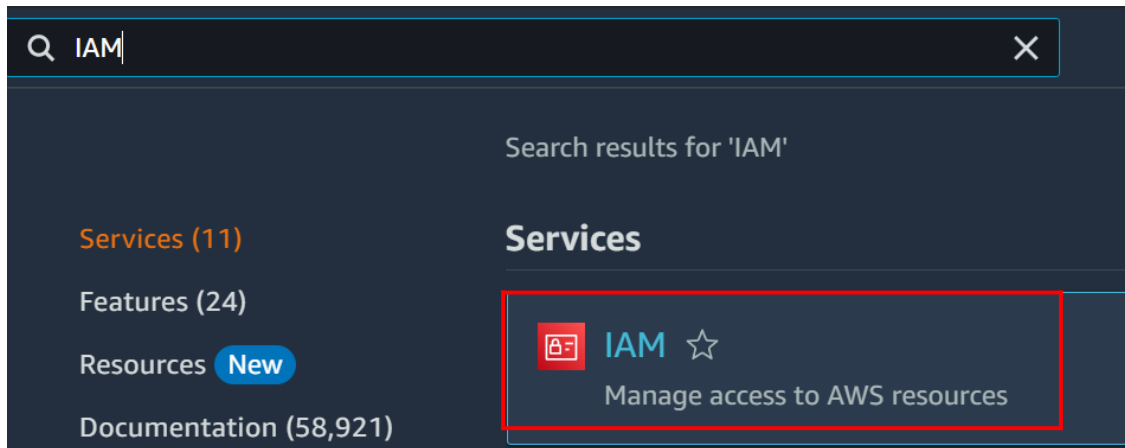

### 1. Install AWS CLI on KillerCoda (Ubuntu Linux):

- To install the AWS CLI, run the following commands.

```
curl "https://awscli.amazonaws.com/awscli-exe-linux-x86_64.zip" -o "awscliv2.zip"
unzip awscliv2.zip
sudo ./aws/install
```

## 2. Create IAM Policy for ECR Access:

- First, create an IAM policy that allows necessary permissions for Amazon ECR.
- Go to AWS console, search for **IAM**.

- In IAM **Dashboard**, click on **Policies**.
- Click on **Create policy**.

- Click on **JSON**.

### Specify permissions [Info](#)

Add permissions by selecting services, actions, resources, and conditions. Build permission statements using the JSON editor.

- Then use the following JSON code for the IAM user Policy to provide Amazon ECR permissions for Creating repositories and pushing images.

## Policy editor

```
1 {  
2   "Version": "2012-10-17",  
3   "Statement": [  
4     {  
5       "Effect": "Allow",  
6       "Action": [  
7         "ecr:CreateRepository",  
8         "ecr:DescribeRepositories",  
9         "ecr:ListImages",  
10        "ecr:BatchCheckLayerAvailability",  
11        "ecr:BatchGetImage",  
12        "ecr:GetDownloadUrlForLayer",  
13        "ecr:InitiateLayerUpload",  
14        "ecr:UploadLayerPart",  
15        "ecr:CompleteLayerUpload",  
16        "ecr:PutImage",  
17        "ecr:GetAuthorizationToken"  
18      ],  
19      "Resource": "*"   
20    }  
21  ]  
22 }
```

- Then click on **Next**.
- Enter **name** for your policy.

## Policy details

Policy name

Enter a meaningful name to identify this policy.

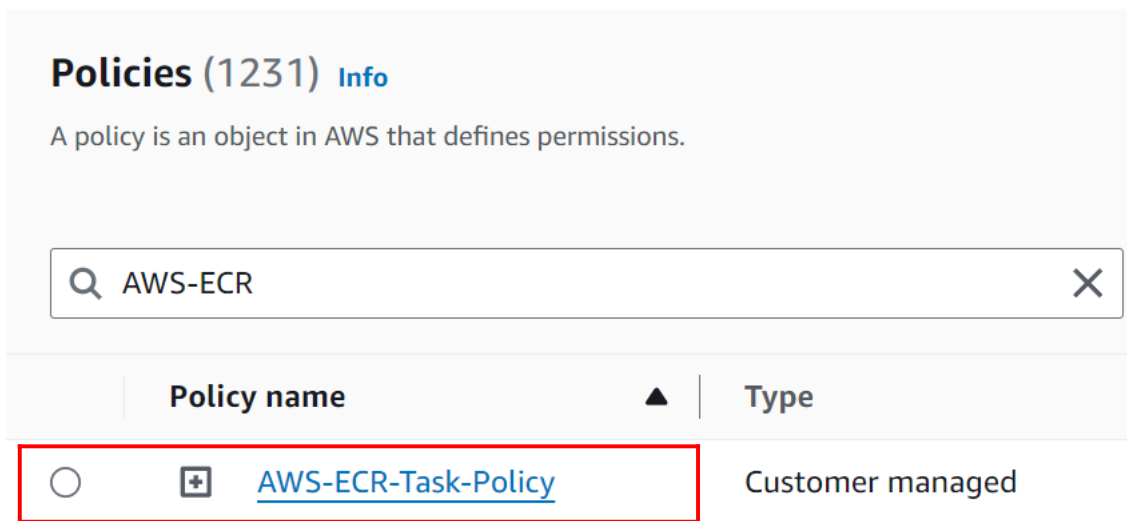

AWS-ECR-Task-Policy

Maximum 128 characters. Use alphanumeric and '+=, @- \_' characters.

- Click on **Create policy**.

## Policy created successfully!!

### 3. Attach Policy to IAM User and create IAM user:

- Go to the IAM Management Console.
- Navigate to **Users** in the left-hand side.
- Click on **Create user**.
- Specify your user's name.

#### User details

User name

Siddhi\_Vinayaka

The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ \_ - (hyphen)

- Under **Set permissions**, select **Attach policies directly** and select the policy created (i.e AWS-ECR-Task-Policy).

**Set permissions**

Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. [Learn more](#)

**Permissions options**

☐ **Add user to group**  
 Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.

☐ **Copy permissions**  
 Copy all group memberships, attached managed policies, and inline policies from an existing user.

☒ **Attach policies directly**  
 Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

**Permissions policies (1233)** [Create policy](#)

Choose one or more policies to attach to your new user.

Filter by Type

Q AWS-ECR X All types 1 match

<input type="checkbox"/>	Policy name <a href="#">↗</a>	Type	Attached entities
<input type="checkbox"/>	<a href="#">+ AWS-ECR-Task-Policy</a>	Customer managed	0

- Then click **Next**.
- Review and create, click on **Create user**

[Cancel](#)
[Previous](#)
[Create user](#)

#### 4. Create Access Key for IAM User:

- Still on the IAM user detail page:
- Under the "**Security credentials**" tab, click "**Create access key**".

# Siddhi\_Vinayaka [Info](#)

## Summary

## Access keys (0)

[Create access key](#)

Use access keys to send programmatic calls to AWS from the AWS CLI, AWS Tools for PowerShell, AWS SDKs, or direct AWS API calls. You can have a maximum of two access keys (active or inactive) at a time. [Learn more](#) 

No access keys. As a best practice, avoid using long-term credentials like access keys. Instead, use tools which provide short term credentials. [Learn more](#) 

[Create access key](#)

- Then you will see **Access Key ID** and **Secret Key**.
- Keep the Access ID and key safe.

## 5. Configure AWS Credentials:

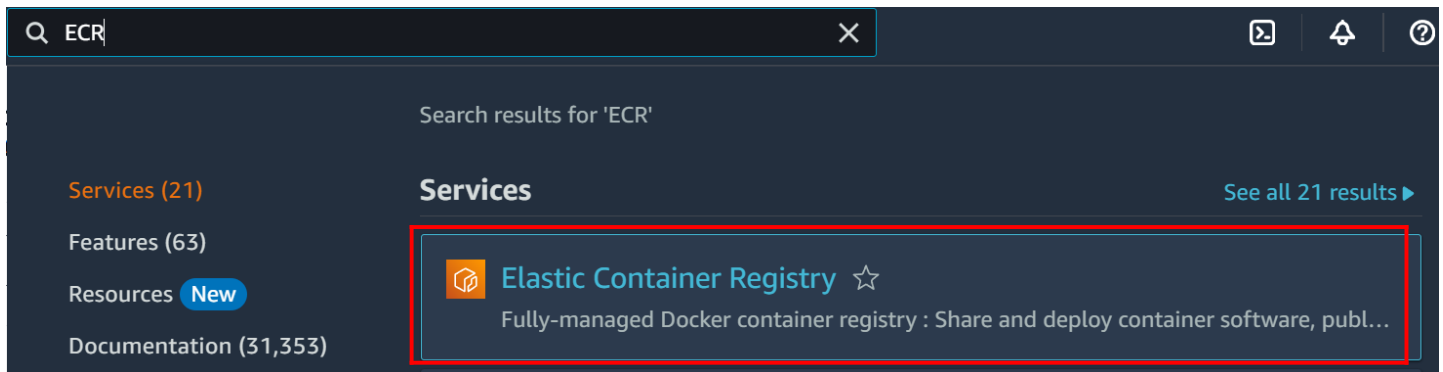

- Configure AWS credentials using the **aws Configure** command.
- Provide your **AWS Access Key ID, Secret Access Key, AWS Region**, and output format as **JSON**

```
ubuntu $ aws configure
AWS Access Key ID [None]: 
AWS Secret Access Key [None]: 
Default region name [None]: us-east-1
Default output format [None]: 
ubuntu $
```

## Step 3: Create an ECR Repository

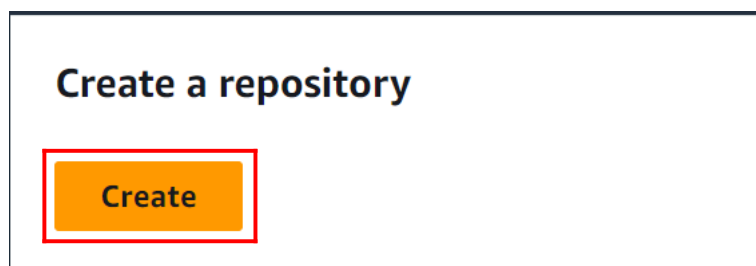

### 1. Navigate to **Amazon ECR**:

- Use the AWS services search bar and search **ECR**

### 2. Create a New Repository:

- In the Amazon ECR console, click on **Create**

### 3. Configure Repository Settings:

- Enter a unique name for your repository (e.g., **my-ecr-repo**).
- Choose visibility settings (**Private**)

[Amazon ECR](#) > [Private registry](#) > [Repositories](#) > [Create repository](#)

## Create repository

### General settings

Visibility settings [Info](#)

Choose the visibility setting for the repository.

☒ **Private**  
Access is managed by IAM and repository policy permissions.

☐ **Public**  
Publicly visible and accessible for image pulls.

Repository name

Provide a concise name. A developer should be able to identify the repository contents by the name.

767398120915.dkr.ecr.us-east-1.amazonaws.com/

11 out of 256 characters maximum (2 minimum). The name must start with a letter and can only contain lowercase letters, numbers, hyphens, underscores, periods and forward slashes.

- click the **Create repository** button.

[Cancel](#) [Create repository](#)

## 4. Repository Created:

- **repository has been created successfully!!**

### Repositories

✓ Successfully created my-ecr-repo

#### Private repositories (2)

[View push commands](#)[Delete](#)[Actions ▼](#)

	Repository name ▲	URI	Created at ▼	Tag immutability
<input type="radio"/>	my-ecr-repo	361769563560.dkr.ecr.ap-south-1.amazonaws.com/my-ecr-repo	21 March 2025, 14:38:42 (UTC+05.5)	Mutable

## Step5: Push Docker Image to ECR

### 1. Push commands for **my-ecr-repo**:

- Click on **Repository name**.
- Then Click on "**View push commands**".

[Amazon ECR](#) > [Private registry](#) > [Repositories](#) > my-ecr-repo

my-ecr-repo

[View push commands](#)[Edit](#)

- **By following below steps, you can successfully Push your Docker image to Amazon ECR and make it available for use in ECS**
- Run the following commands one by one.

## Push commands for my-ecr-repo

macOS / Linux

Windows

Make sure that you have the latest version of the AWS CLI and Docker installed. For more information, see [Getting Started with Amazon ECR](#).

Use the following steps to authenticate and push an image to your repository. For additional registry authentication methods, including the Amazon ECR credential helper, see [Registry Authentication](#).

1. Retrieve an authentication token and authenticate your Docker client to your registry. Use the AWS CLI:

```
aws ecr get-login-password --region us-east-1 | docker login --username AWS --password-stdin  
767398120915.dkr.ecr.us-east-1.amazonaws.com
```

Note: If you receive an error using the AWS CLI, make sure that you have the latest version of the AWS CLI and Docker installed.

2. Build your Docker image using the following command. For information on building a Docker file from scratch see the instructions [here](#). You can skip this step if your image is already built:

```
docker build -t my-ecr-repo .
```

3. After the build completes, tag your image so you can push the image to this repository:

```
docker tag my-ecr-repo:latest 767398120915.dkr.ecr.us-east-1.amazonaws.com/my-ecr-repo:latest
```

4. Run the following command to push this image to your newly created AWS repository:

```
docker push 767398120915.dkr.ecr.us-east-1.amazonaws.com/my-ecr-repo:latest
```

Close

## 2. Push command for my-ecr-repo:

### 1. Authenticate Docker to ECR

```
ubuntu$ aws ecr get-login-password --region us-east-1 | docker login --username AWS --password-stdin 767398120915.dkr.ecr.us-east-1.amazonaws.com
WARNING! Your password will be stored unencrypted in /root/.docker/config.json.
Configure a credential helper to remove this warning. See
https://docs.docker.com/engine/reference/commandline/login/#credentials-store

Login Succeeded
ubuntu$
```

### 2. Build Docker Image

```
ubuntu$ docker build -t my-ecr-repo .
DEPRECATED: The legacy builder is deprecated and will be removed in a future release.
            Install the buildx component to build images with BuildKit:
            https://docs.docker.com/go/buildx/

Sending build context to Docker daemon 277.3MB
Step 1/5 : FROM docker.io/redhat/ubi9
latest: Pulling from redhat/ubi9
f50ab65647ec: Pull complete
Digest: sha256:081c96d1b1c7cd1855722d01f1ca53360510443737b1eb33284c6c4c330e537c
```

### 3. Tag Docker Image

```
ubuntu$ docker tag my-ecr-repo:latest 767398120915.dkr.ecr.us-east-1.amazonaws.com/my-ecr-repo:latest
ubuntu$
```

### 4. Push Docker Image to ECR

```
ubuntu$ docker push 767398120915.dkr.ecr.us-east-1.amazonaws.com/my-ecr-repo:latest
The push refers to repository [767398120915.dkr.ecr.us-east-1.amazonaws.com/my-ecr-repo]
8e431543afd3: Pushed
fd34a9a7a805: Pushed
f36b8ecab85c: Pushed
latest: digest: sha256:dd71283d3f1c09c465761051a61cc92f7960ca2895ada7b24339cff0c8cfc883 size: 948
ubuntu$
```

### 3. List Images in ECR Repository:

- Click on the refresh button to verify that the Docker Image has been uploaded to the ECR repository .

Images (1)								Delete	Details	Scan
<input type="text" value="Search artefacts"/>										
<input type="checkbox"/>	Image tag	Artifact type	Pushed at	Size (MB)	Image URI	Digest				
<input type="checkbox"/>	latest	Image	20 March 2025, 23:08:37 (UTC+05.5)	73.08	 Copy URI	sha256:292ea7dee2c0f33...				

## Step 4: Create ECS

- Go to the AWS Management Console and search ECS.

Search results for 'ECS'

Services (26)

Features (66)

Documentation (27,274)

Services

 Elastic Container Service ☆

Highly secure, reliable, and scalable way to run containers

## 1. Create **ECS Cluster**:

- Enter name for your cluster
- Under the **Infrastructure**, choose "**AWS Fargate**"
- Click on **Create**.zz

### Cluster configuration

Cluster name

cluster1

Cluster name must be 1 to 255 characters. Valid characters are a-z, A-Z, 0-9, hyphens (-), and underscores (\_).

Default namespace - *optional*

Select the namespace to specify a group of services that make up your application. You can overwrite this value at the service level.

**▼ Infrastructure** [Info](#)

Serverless

Your cluster is automatically configured for AWS Fargate (serverless) with two capacity providers. Add Amazon EC2 instances.

☒ **AWS Fargate (serverless)**  
Pay as you go. Use if you have tiny, batch, or burst workloads or for zero maintenance overhead. The cluster has Fargate and Fargate Spot capacity providers by default.

## 2. Create **Task Definition**:

- Click on **Create new task definition**.

▼

Create new task definition ▲

Create new task definition

Create new task definition with JSON

- Under **task definition family** enter name for your task.
- Choose **FARGATE** launch type.

**Task definition configuration**

Task definition family

[Info](#)

Specify a unique task definition family name.

ECR-httpd

Up to 255 letters (uppercase and lowercase), numbers, hyphens, and underscores are allowed.

▼ Infrastructure requirements

Specify the infrastructure requirements for the task definition.

Launch type

[Info](#)

Selection of the launch type will change task definition parameters.

☒ AWS Fargate  
Serverless compute for containers.

☐ Amazon EC2 instances  
Self-managed infrastructure using Amazon EC2 instances.

### 3. Container:

- **Name of container** (web-server)
- **Image URL**: Copy the URI from the Repository that we created earlier
- **Essential Container** (Yes)
- **Port Mapping** Container (Port 80),
- **Port Name** (httpd)

▼ Container - 1 [Info](#)

Essential containerRemove

Container details

Specify a name, container image, and whether the container should be marked as essential. Each task definition must have at least one essential container.

Name

Image URI

Essential container

Add capacity provider

- Under Deployment configuration, choose **Task**.
- In **Task definition** Select created task definition, (i.e., **ECR-httpd**)

## Deployment configuration

### Application type [Info](#)

Specify what type of application you want to run.

☐ Service

Launch a group of tasks handling a long-running computing work that can be stopped and restarted. For example, a web application.

☒ Task

Launch a standalone task that runs and terminates. For example, a batch job.

### Task definition

Select an existing task definition. To create a new task definition, go to [Task definitions](#).

☐ Specify the revision manually

Manually input the revision instead of choosing from the 100 most recent revisions for the selected task definition family.

Family

ECR-httpd

Revision

1 (LATEST)

### Desired tasks

Specify the number of tasks to launch.

1

- Under **Networking**, click **Create security group**

## ▼ Networking

### VPC [Info](#)

Choose the Virtual Private Cloud to use.

vpc-0ee70a4e80cc6a1fb  
default

### Subnets

Choose the subnets within the VPC that the task scheduler should consider for placement.

Choose subnets

Clear current selection

subnet-0c0784ce3385bcd19 ✕  
us-east-1a 172.31.32.0/20

subnet-08eb62854cb42d9cb ✕  
us-east-1e 172.31.48.0/20

subnet-04d36f595b9c106c9 ✕  
us-east-1c 172.31.80.0/20

us-east-1f 172.31.64.0/20

subnet-0fca856c1e4e7222c ✕  
us-east-1b 172.31.0.0/20

subnet-0a14c6c7f99b28291 ✕  
us-east-1d 172.31.16.0/20

### Security group [Info](#)

Choose an existing security group or create a new security group.

☐ Use an existing security group

☒ Create a new security group

- Create security group with inbound rule for **HTTP (80)**

☐ Use an existing security group

☒ Create a new security group

#### Security group details

Specify the configuration to use when creating the new security group.

#### Security group name

ecs-qwcyj2e9

Security group name must be 1 to 255 characters. Valid characters are a-z, A-Z, 0-9, underscores (\_), hyphens (-), colons (:), forward slashes (/), parentheses (()), hashtags (#), commas (,), at signs (@), brackets ([]), plus signs (+), equal signs (=), ampersands (&), semicolons (;), brackets ({}), exclamation points (!), dollar signs (\$), asterisks (\*).

#### Security group description

Created in ECS Console

Security group description must be 1 to 255 characters. Valid characters are a-z, A-Z, 0-9, underscores (\_), hyphens (-), colons (:), forward slashes (/), parentheses (()), hashtags (#), commas (,), at signs (@), brackets ([]), plus signs (+), equal signs (=), ampersands (&), semicolons (;), brackets ({}), exclamation points (!), dollar signs (\$), asterisks (\*).

#### Inbound rules for security groups

Add one or more ingress rules for your security group.

Type	Protocol	Port range	Source	Values	
HTTP ▼	TCP	80	Anywhere ▼	0.0.0.0/0, ::/0	Delete
Enter a valid port or port range between 0 and 65535. For example: 80 or 0-1023.					

- Then click on **Create**.

## 5. Access **HTTPD** Page:

- Click on Task, that we created.
